

JAY AMBE INDUSTRIES

Export Page Planning Document

Section-by-Section Structure for React Website Development

Internal working document for content planning, UI design and AI-editor implementation

Purpose of This Document

This document defines the complete layout and content direction for the dedicated Export page of the Jay AMBE Industries React website. The page must build confidence among international buyers by proving that AMBE understands export requirements, custom manufacturing, documentation, packaging, container loading and long-term buyer support.

Primary Page Objective

An international buyer should finish the page with the confidence that Jay AMBE Industries is a serious manufacturer capable of executing, packing, documenting and dispatching stainless-steel equipment for global markets.

Export Page Conversion Journey

Understand Export Capability → Verify Manufacturing Strength → Review Documentation & Packaging → See Global Proof → Contact Export Team

Recommended Page Structure: 10 Sections

No.	Section	Main Purpose
1	Export Hero	Position AMBE as an export-ready manufacturer
2	Immediate Export Trust Bar	Create instant buyer confidence
3	Export Capability Introduction	Explain what AMBE can supply internationally
4	International Buyer Journey	Show the complete export workflow
5	Documentation & Commercial Support	Prove export process knowledge
6	Export Packaging & Container Loading	Show protection, packing and dispatch capability
7	OEM, Private Label & Distributor Partnerships	Generate long-term international opportunities
8	Global Presence & Export Markets	Visualise confirmed international reach
9	Export Projects & Case Studies	Provide real evidence of completed work
10	Export Enquiry & Final CTA	Convert qualified buyers into enquiries

1. Export Hero

Section goal

Immediately communicate that AMBE manufactures stainless-steel dairy, process and institutional equipment for international markets.

Recommended layout

A wide but controlled hero banner, approximately 500-600 px high. Use a real photograph of packed equipment, factory dispatch, container loading or finished stainless-steel machinery. Place concise content on the left and retain clean negative space.

Suggested heading direction

Manufactured in India. Engineered for Global Markets.

Content to include

- Clear export-focused company positioning
- Manufacturing since 2006
- Food-grade SS304 and SS316 capability
- Custom manufacturing and OEM support
- International supply and shipping support
- Short supporting statement explaining the main product areas

Required real photography / proof

- Real container-loading image
- Export-ready packed equipment
- Finished AMBE equipment inside the factory

Recommended calls to action

- Contact Export Team
- Download Export Catalogue

Avoid

- Generic world-trade stock image
- AI-generated factory or port image
- Rotating 3D globe
- Long marketing paragraph

Implementation notes for the AI editor

- Preserve large typography and white space
- Keep one primary and one secondary CTA
- Do not place many statistics inside the hero

2. Immediate Export Trust Bar

Section goal

Create buyer confidence within the first screen after the hero.

Recommended layout

Use one full-width horizontal band with six compact trust points separated by fine vertical dividers. Do not use six floating rounded cards.

Suggested heading direction

Export-Ready Manufacturing at Every Stage

Content to include

- Since 2006
- Food-Grade SS304 / SS316
- Export Documentation Support
- OEM Manufacturing
- Custom Engineering
- International Packaging & Shipping

Required real photography / proof

- Optional close-up icons derived from real tools, materials or packaging

Avoid

- Unverified country counts
- Fake certification icons
- Animated counters without confirmed data

Implementation notes for the AI editor

- Keep labels short
- Use subtle entrance animation only once
- Make the band responsive as a two-column or stacked grid on mobile

3. Export Capability Introduction

Section goal

Explain what AMBE supplies internationally and why the company is suitable for overseas buyers.

Recommended layout

Two-column editorial layout. Use a real manufacturing or finished-equipment image on one side and concise, factual export content on the other. Add a small factual summary below.

Suggested heading direction

A Manufacturing Partner for International Equipment Requirements

Content to include

- Standard and custom stainless-steel equipment
- Dairy collection and processing equipment
- Institutional and mega-kitchen systems
- Process tanks and hygienic vessels
- Drawing-based and application-based fabrication
- Bulk orders, project supply and repeat distributor orders
- Buyer communication from enquiry through dispatch

Required real photography / proof

- Real factory floor
- Large finished equipment
- Product lineup prepared for dispatch

Recommended calls to action

- Explore Product Solutions
- Discuss Your Requirement

Avoid

- Generic statements such as “best exporter”
- Claims about markets or volumes without proof

Implementation notes for the AI editor

- Use facts rather than promotional adjectives
- Link product references to relevant solution pages

4. International Buyer Journey

Section goal

Show international buyers exactly how AMBE handles an export requirement from first enquiry to final dispatch.

Recommended layout

Create a clean process flow using numbered steps, connected by a simple line or directional path. Use supporting real images for selected steps rather than icons for every step.

Suggested heading direction

From Requirement to International Dispatch

Content to include

- 1. Buyer enquiry and application details
- 2. Technical discussion and product selection
- 3. Capacity, material and configuration confirmation
- 4. Quotation and commercial terms
- 5. Drawing or specification approval
- 6. Manufacturing and quality inspection
- 7. Export packing and documentation
- 8. Container loading and dispatch
- 9. Shipment communication and buyer support

Required real photography / proof

- Technical discussion
- Fabrication process
- Inspection
- Packing
- Container loading

Recommended calls to action

- Start an Export Enquiry

Avoid

- Overcomplicated animated timeline
- Promises of services the client does not provide

Implementation notes for the AI editor

- On mobile, display the process as a vertical stepper
- Keep each step description to one or two lines

5. Documentation & Commercial Support

Section goal

Prove that AMBE understands the documentation and coordination required for international transactions.

Recommended layout

Use a structured two-part layout: documentation support on one side and commercial coordination on the other. Include actual redacted document samples when the client provides them.

Suggested heading direction

Documentation Support for Smoother International Transactions

Content to include

- Commercial invoice
- Packing list
- Proforma invoice
- Certificate of origin, where applicable
- HS code and shipment information
- Bill of lading coordination
- Insurance or inspection documents, where applicable
- Product specification and drawing records
- Payment terms such as bank transfer or letter of credit, only if confirmed
- Buyer and freight-forwarder coordination

Required real photography / proof

- Redacted export documents
- Specification sheets
- Packing-list or invoice samples

Avoid

- Displaying sensitive customer information
- Listing documents AMBE cannot actually provide
- Legal guarantees about customs clearance

Implementation notes for the AI editor

- Mark variable documents with “where applicable”
- Ask the client to confirm the exact document list before publishing

6. Export Packaging & Container Loading

Section goal

Demonstrate how finished equipment is protected for long-distance transport.

Recommended layout

Use a large photographic story with packing stages. Combine one main image with smaller supporting images and concise technical notes.

Suggested heading direction

Packed to Protect Equipment Across Long-Distance Shipping

Content to include

- Equipment cleaning and pre-dispatch inspection
- Protective wrapping and moisture protection
- Wooden crates or pallets, where required
- Internal support and movement protection
- Protection of polished stainless-steel surfaces
- Product and package identification
- Container space planning

- Secure loading and lashing
- Loading photographs and dispatch records

Required real photography / proof

- Protective wrapping
- Wooden packing or palletisation
- Equipment inside container
- Container sealing or dispatch

Recommended calls to action

- Discuss Export Packaging

Avoid

- Stock shipping-container images with no AMBE proof
- Claims of damage-free delivery guarantees

Implementation notes for the AI editor

- Use only actual packing methods followed by AMBE
- Add packaging options based on product size and destination

7. OEM, Private Label & Distributor Partnerships

Section goal

Generate enquiries from overseas brands, equipment dealers and regional distributors.

Recommended layout

Use a split layout with three clear partnership types. Avoid a generic card grid; use strong headings, short explanations and one relevant image per partnership type.

Suggested heading direction

Manufacturing Partnerships Beyond a Single Order

Content to include

- OEM manufacturing based on buyer drawings or specifications
- Private-label product supply, if confirmed
- Custom product branding and identification, if available
- Bulk production for distributors and dealers
- Repeat order planning
- Application-specific modifications
- Packaging aligned with buyer or market requirements
- Confidentiality and drawing control, subject to agreed terms
- Distributor opportunities in selected markets

Required real photography / proof

- Bulk product lineup
- Custom nameplates or packaging, if available
- Dealer or exhibition photographs

Recommended calls to action

- Discuss OEM Manufacturing
- Become a Distribution Partner

Avoid

- Promising exclusivity without commercial approval
- Using logos of buyers without permission

Implementation notes for the AI editor

- Create separate enquiry types for OEM and distributors
- Keep all private-label claims conditional until confirmed

8. Global Presence & Export Markets

Section goal

Visually communicate international reach without exaggerating or inventing markets.

Recommended layout

Use an elegant flat world map with markers only for confirmed countries. Add a short market list and optional region-based filters. Place supporting export images below the map.

Suggested heading direction

Supporting Buyers Across International Markets

Content to include

- Confirmed export countries
- Key regions served
- Product categories supplied by market
- Year or project type where appropriate
- International exhibitions or buyer meetings
- Future distributor markets, clearly separated from existing export markets

Required real photography / proof

- Real project or dispatch images tied to confirmed countries
- Trade exhibition photographs

Recommended calls to action

- Contact Export Team

Avoid

- Random markers
- Animated flight paths
- Rotating globe
- Unverified “worldwide presence” claims

Implementation notes for the AI editor

- Use two marker states: existing markets and opportunity markets
- Country data should come from a single editable React data file

9. Export Projects & Case Studies

Section goal

Build credibility through real international supplies, institutional orders and dispatch evidence.

Recommended layout

Use three to five detailed case-study previews rather than a large gallery. Each case study should have a real image, location, requirement, solution and result.

Suggested heading direction

International Work That Demonstrates Capability

Content to include

- Bangladesh supply
- Sri Lanka projects
- Container dispatches
- Trade exhibitions
- Large institutional orders
- OEM or distributor orders, where permission exists

Required real photography / proof

- Equipment supplied
- Packing and dispatch
- Installation or customer-site photos
- Exhibition participation

Recommended calls to action

- View All Projects
- Discuss a Similar Requirement

Avoid

- Case studies with no factual information
- Fake customer names
- Unverified project results

Implementation notes for the AI editor

- Recommended card fields: country, year, equipment, capacity, material, requirement, solution
- Create a reusable case-study template for future additions

10. Export Enquiry & Final CTA

Section goal

Convert qualified international visitors into detailed export enquiries.

Recommended layout

Use a strong final section with concise text and a serious technical enquiry form. The form should be simple enough to complete but detailed enough to qualify the lead.

Suggested heading direction

Planning an International Equipment Requirement?

Content to include

- Buyer name
- Company name
- Country

- Business email
- Phone / WhatsApp
- Buyer type: end user, dealer, distributor, OEM or project company
- Product or solution required
- Required capacity and quantity
- Material grade
- Destination port or country
- Expected purchase timeline
- Project details
- Drawing or specification upload

Required real photography / proof

- Optional background image of actual export-ready equipment

Recommended calls to action

- Request an Export Quote
- Contact Export Team
- Download Product Catalogue

Avoid

- Generic “Inquire Now” button
- Very long form without grouping
- Mandatory fields that are not essential

Implementation notes for the AI editor

- Group the form into Buyer Details, Requirement and Uploads
- Send submissions to the correct export email or CRM
- Show a clear confirmation message and expected response process

Recommended Export Page Content Flow

1. Prove AMBE is an export-ready manufacturer.
2. Explain the products and solutions available for international supply.
3. Show how export enquiries are technically and commercially handled.
4. Demonstrate documentation, packaging and container-loading capability.
5. Present OEM and distributor opportunities.
6. Show confirmed global markets and real project proof.
7. Guide the visitor toward a detailed export quotation request.

Site-Wide Export CTAs

- Contact Export Team
- Request an Export Quote
- Download Export Catalogue
- Discuss OEM Manufacturing
- Become a Distribution Partner
- Send Your Technical Requirement
- Upload Your Drawing

Real Content and Assets Required From the Client

- Confirmed list of export countries and regions
- Export project names or anonymised project descriptions
- Real container-loading and packaging photographs
- Export-ready product photographs
- Confirmed export documents and redacted samples
- Packaging methods used for different product sizes
- Payment terms accepted for international orders
- Dispatch ports and logistics process
- OEM and private-label services actually offered
- Distributor partnership terms or enquiry process
- Export contact person, email and phone number
- Company profile and export catalogue PDFs
- International testimonials with permission
- Trade exhibition and overseas meeting photographs

Claims That Must Be Confirmed Before Publishing

- Number of countries served
- Worldwide shipping coverage
- Exact documentation support
- Inspection and certification capabilities
- Letter of credit or other payment options
- Private-label and OEM scope
- Distributor territories and exclusivity
- Warranty and after-sales support for export orders

- Installation or commissioning support outside India
- Production capacity and export lead times

Design Rules for the Export Page

- Use only real AMBE factory, product, packaging and dispatch photography.
- Maintain large headings, white space and minimal colour usage.
- Avoid generic cargo ships, globes, fake routes and AI-generated factory imagery.
- Do not turn the page into a list of product cards.
- Use technical facts and real evidence instead of broad marketing claims.
- Keep animations subtle and purposeful.
- Use verified countries and project information only.
- Every major section should naturally guide the visitor toward an export enquiry.

Recommended React Component Structure

- ExportHero
- ExportTrustBar
- ExportCapabilityIntro
- ExportProcessTimeline
- ExportDocumentation
- ExportPackagingStory
- PartnershipOpportunities
- GlobalMarketMap
- ExportCaseStudies
- ExportEnquiryForm

Store export countries, trust points, process steps, documentation items and case studies in separate editable data files. This will allow the AI editor to update content without changing the component structure.
